Michael J. Freedman

353 Serra Mall, Room 288
Stanford, CA 94305-9025
(650) 723-1863

http://www.michaelfreedman.org/
mfreed@scs.stanford.edu
Citizenship: US

Education

New York University ..... New York, NY

Ph.D. Candidate in Computer Science ..... Expected May 2007
Thesis title: *Harnessing Widespread Cooperation to Democratize Content Distribution*
Visiting **Stanford University**, September 2005–May 2007
Advisor: David Mazières ; GPA: 4.0/4.0

M.S. in Computer Science ..... May 2005
Advisor: David Mazières ; GPA: 4.0/4.0

Massachusetts Institute of Technology ..... Cambridge, MA

M.Eng. in Electrical Engineering and Computer Science ..... June 2002
Thesis title: *A Peer-to-Peer Anonymizing Network Layer*
Advisor: Robert Morris ; GPA: 5.0/5.0

S.B. in Computer Science, Minor in Political Science ..... June 2001
Thesis title: *An Anonymous Communications Channel for the Free Haven Project*
Advisor: Ron Rivest ; GPA: 4.9/5.0

Interests

Distributed systems, security, networking, and cryptography

Research

2002–present **Cooperative content distribution.** Conceived and led the Coral Project. Designed and built an Internet-scale, self-organizing web-content distribution network: CoralCDN [11] uses a network of cooperating DNS redirectors and HTTP proxies, backed by a decentralized indexing infrastructure [18], to allow oblivious clients to transparently download content from nearby servers, while avoiding distant or heavily-loaded ones. CoralCDN has been in production use on 300 servers since March 2004, currently receiving about 25 million HTTP requests from over 1 million clients per day, serving several terabytes of data. http://coralcdn.org/

With a focus on settings with mutually-distrustful clients, Shark [6] provides a distributed file system that improves scalability and performance through cooperative reads, using Coral's indexing layer to locate files. Yet Shark preserves traditional semantics, manageability, and security. Other research provides integrity guarantees for large files encoded with rateless erasure codes, via a homomorphic hash function that can verify downloaded blocks on-the-fly [10].

Ongoing focus on untrusted settings for CDNs (with C. Aperjis, R. Johari, and D. Mazières), devising incentive-compatible mechanisms that cause nodes to contribute bandwidth for improved quality-of-service. This work uses market-pricing techniques and virtual currency to ensure effective bandwidth usage and network utilization, while still preventing cheating.

2005–present **Anycast.** Designed and built OASIS, a server-selection infrastructure that provides locality- and load-based anycast for replicated Internet services [3] [26]. OASIS tackles the problems of leveraging disparate services to perform (potentially error-prone) network measurement and of scalably managing state information about many services and their participating nodes. OASIS has been in production use since Nov. 2005 and has been adopted by more than a dozen distributed services, handling thousands of replicas. Performed background studies of the geographic locality of IP prefixes [5] and the efficacy of virtual coordinate systems [16]. http://oasis.coralcdn.org/

2006–present **IP analytics.** By instrumenting CoralCDN, used active web content to measure and analyze the characteristics of over 7 million clients with respect to "edge technologies" (NATs, proxies, DNS

and DHCP) [1]. Results quantify how Internet services can use IP addresses to identify clients and enforce access-control decisions. Commercialized historical and real-time techniques for proxy detection and IP geolocation; acquired by Quova, Inc. in Nov. 2006 and currently being tested at large Internet services. `http://illuminati.coralcdn.org/`

2006–present **Enterprise networks.** Design and implementation contributions to Ethane [2] [25], a backwards-compatible protection and management architecture for enterprise networks. Ethane network switches provide connectivity through on-demand virtual circuits, yet they enforce security policies on a per-flow basis through centrally-managed, atomic, auditable name bindings. Deployment at Stanford since Nov. 2006, serving hundreds of hosts. `http://yuba.stanford.edu/ethane/`

2005–present **Reliable email.** Designed and implemented the security and privacy protections in Re:, an email acceptance system that leverages social proximity for automated whitelisting [4], using private matching [9]. Recent analysis of privacy for social networks led to more efficient protocols based only on symmetric-key operations (or achieving stronger properties using bilinear maps) [13].

2005–present **Fault-tolerance groups.** Researched abstractions for the scalable construction of fault-tolerant, distributed systems [14]. Ongoing work with L. Subramanian on partitioning large, dynamic systems into smaller groups, which apply fault-tolerance or reliable communication protocols.

2000–present **Privacy-preserving protocols.** Developed cryptographic protocols for private matching (PM), which computes the set intersection between two or more parties' inputs [9]. PM uses the properties of homomorphic encryption to privately evaluate a polynomial representation of input sets. Subsequent work led to improved constructions for keyword search (KS) based on oblivious pseudorandom functions [7]. Earlier research included the design and implementation of a prototype system for anonymous cryptographic e-cash (with S. Brands and I. Goldberg), as well as considerations for privacy-enabled digital rights management (DRM) systems [19] [22].

2000–2002 **Anonymity systems.** Designed and implemented Tarzan [12] [20], a peer-to-peer anonymous IP network layer that is strongly resistant to traffic analysis. Helped design Free Haven, a distributed system for the anonymous publishing, storage, and retrieval of information [23] [24] [28].

Positions

3/06–present **Co-founder** (with Martin Casado). Illuminics Systems, Mountain View, CA.

9/05–present **Research Assistant.** Stanford University (SCS Group), Stanford, CA.

5/05–8/05 **Research Assistant.** University of California, Berkeley, Berkeley, CA.

9/02–5/05 **Research Assistant.** New York University (SCS Group), New York, NY.

5/03–8/03 **Research Associate.** HP Labs (Trusted Systems Lab), Princeton, NJ.

9/01–6/02 **Research Assistant.** MIT LCS (PDOS Group), Cambridge, MA.

5/01–8/01 **Research Intern.** InterTrust Technologies (STAR Lab), Santa Clara, CA.

6/00–8/00 **Research Intern.** Zero-Knowledge Systems Labs, Montreal, Quebec.

2/99–5/01 **Undergrad Researcher.** MIT LCS (SLS and CIS Groups), Cambridge, MA.

6/99–8/99 **Intern.** Sun Microsystems (HPC Group), Burlington, MA.

6/98–8/98 **Intern.** Cognex Corporation, Natick, MA.

6/96–2/98 **Undergrad Researcher.** MIT Francis Bitter Magnet Lab, Cambridge, MA.

Service

5/03–5/05 **Founder and Organizer.** NYU Systems Reading Group, New York, NY.

2/04–5/05 **Faculty Representative.** NYU Courant Student Organization, New York, NY.

9/01–5/02 **Co-organizer.** MIT Applied Security Reading Group, Cambridge, MA.

9/97–5/02 **President, VP, Winter School Organizer.** MIT Outing Club, Cambridge, MA

Teaching

1/04–5/04	**Teaching Assistant, Lab Instructor.** V22.0480—Computer Networks, NYU.
2/02–5/02	**Teaching Assistant.** 6.033—Computer System Engineering, MIT.
2/01–5/01	**Teaching Assistant.** 6.033—Computer System Engineering, MIT

Advising

Masters	Justin Pettit (Stanford), Robert Soule (NYU), Jeff Borden (NYU)
Undergraduates	Jeffrey Spehar (Stanford), Kevin Shanahan (NYU), Ed Kupershlak (NYU)

Professional activities

Program comm.	WORLDS '06, UPGRADE-CDN '06, IRIS Student P2P Workshop '03
External reviews	NSDI '07, LATIN '06, HotNets '05, EUROCRYPT '05, Usenix Technical '05, ISC '04, CRYPTO '04, IPDPS '04, INFOCOM '04, CCS '03, SOSP '03, ISC '03, PODC '03, EUROCRYPT '03, WPES '02
Journal reviews	ACM Transactions on Computer Systems (TOCS), Journal of Cryptology, Journal of Parallel and Distributed Computing (JPDC), Handbook of Internet Security - P2P Security (Wiley & Sons), Computer Journal

Honors

NDSEG (DoD) Graduate Fellow, 2002-2005
NYU McCracken Fellow, 2002-2006
Henning Biermann Award, NYU Computer Science, 2005 (for outstanding education and service)

Best demo (OASIS), WORLDS 2005.
First paper (highest-ranked), EUROCRYPT 2004 [9].
Award paper, CCS 2002 [12].

Awarded NSF Graduate Fellowship, 2001
Awarded Gordon Wu Fellowship (Princeton), 2001 ; Sterling Prize Fellowship (Yale), 2001
Awarded Graduate Fellowships (U.C.Berkeley, Carnegie-Mellon, UCSD), 2001

Coca-Cola Scholar, 1997-2001 ; Tylenol Scholar, 1997-1999 ; Big 33 Scholar, 1997-1998
Tau Beta Pi, 2000 ; Eta Kappa Nu, 2000 ; Sigma Xi, 2000 ; Order of Omega, 1999
Congressional Award, Silver (1996) and Bronze (1993) medals
